ASE 420 Team Project

Justice Gang

Movie App — Two-Sprint Review

Team

- Owen Newberry — Team Lead

- Austin Shelton

- Cley Shelton

- David-Michael Davies

All team members used AI assistance option #2 (assisted).

Team Rules & Working Agreements

- K.I.S.S. (Keep It Simple & Stupid)

- Start early, finish early — avoid last-minute rushes

- No surprises: keep status updates transparent

- Be on time to meetings and respond promptly

- Commit code to GitHub regularly and push progress

- Submit weekly progress reports on Canvas

- Respectful, accountable collaboration; ask for help early

Project Vision & Goals

- Expand functionality to include TV show support and improved discovery

- Improve UI/UX consistency and allow user theme personalization

- Implement recommendation, randomization, and daily highlight features

- Finalize navigation flow for a cohesive app experience

- Maintain integrations and ensure reliability

Metrics & Project Statistics (Sprint Totals)

- Total features completed: 18

- Total LoC: ~2,500 (approx.)

- Team burndown rate: 100%

Features

Cley Shelton (6)

- Create account / sign up

- Log in with credentials

- Sign out of account

- Delete account

- TV show browsing

- Navigation from login to home

Features (cont.)

Austin Shelton (6)

- Mark movies as "watched" in a tracker tab
- Leave a review score on watched movies
- Write a short review/description
- Suggested Movies
- Best Recent Releases
- Movie of the Day

Features (cont.)

David-Michael Davies (6)

- Visually appealing user interface

- Sort movies by genre

- Show related movies on search

- Dark mode/theme switching

- Random Movie button

- UI polish

Sprint 1 — Objectives

- Research and prototype core features
  - API investigation for movies and TV shows
  - UI wireframes for home, detail, and login flow
- Implement baseline app structure
  - Login/signup flow skeleton
  - Basic movie list and details pages
  - Project scaffolding and repo setup

Sprint 1 — Achievements

- Implemented login → home navigation flow (basic routing)

- Basic movie browsing and details view implemented

- TV show data model researched and initial UI components built by Cley

- Theme switching prototype implemented (David–Michael)

- Recommendation logic prototyped and tested with sample data (Austin)

Sprint 2 — Achievements

- TV show browsing integrated with API; users can switch between movies and TV shows

- Full navigation path: login → home → (movies/TV) → details implemented and tested

- Dark mode/theme toggle completed and applied site-wide (consistent UI fixes)

- Random Movie button implemented and wired to data store

- Suggested Movies and Best Recent Releases sections implemented; Movie of the Day added

Reflections: What Went Wrong

- **API data inconsistencies** — TV vs Movie schemas caused integration delays
  - *Next time:* Build normalization layer earlier in the project
- **Design sync across contributors** — Initial style inconsistencies
  - *Next time:* More clear design from day one
- **Time management** — Some tasks pushed close to deadlines
  - *Next time:* More frequent check-ins

Reflections: What Went Well

- **Team communication** — Weekly syncs kept everyone aligned

- **Modular architecture** — Easy to integrate individual contributions

- **100% feature delivery** — All promised features completed
